DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-29, 33-36, 42, 44-45, 47, and 90-91, drawn to a herpes simplex virus comprising a nucleic acid encoding an antisense to the squamous cell carcinoma related oncogene and a method of expressing *in vitro* and *in vivo* a herpes simplex virus comprising a nucleic acid encoding an antisense to the squamous cell carcinoma related oncogene.

If group I is elected, applicants are further required to elect a single nucleic acid sequence from SEQ ID NOs:1 and 3.

Group II, claim(s) 48-74, 76-79, 86-89, and 92-93, drawn to a herpes simplex virus comprising a nucleic acid encoding a short interfering ribonucleic acid (siRNA) to the squamous cell carcinoma related oncogene and a method of expressing *in vitro* and *in vivo* a herpes simplex virus comprising a nucleic acid encoding an siRNA to the squamous cell carcinoma related oncogene.

The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The special technical feature claimed in the first recited claim in the instant application is a herpes simplex virus comprising a nucleic acid encoding an antisense to the squamous cell carcinoma related oncogene. The antisense comprising SEQ ID NO:1 or 3 of group I does not have the same technical feature with the siRNA comprising SEQ ID NO:5 of group II because of the different nucleic acid compositions (i.e., single-stranded comprising SEQ ID NO:1 or 3 vs. double-stranded comprising SEQ ID NO:5) and the different modes of action (i.e., mRNA cleavage via RNase H vs. mRNA degradation via RISC). Further, the instantly claimed SEQ ID NO:1 and SEQ ID NO:3 are chemically distinct inventions under PCT Rule 13.2 because the two

sequences do not share a significantly identical structure as they comprise different nucleic acid compositions, which encode distinct protein products.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
